

Anthony Kobzar

Anthonykobzar@berkeley.edu • 669-262-0035 • Campbell, CA 95008

Education

University of California, Berkeley

Graduation: 2028

B.A Applied Mathematics + B.S Computer Science

Relevant Coursework: Computer Architecture | Optimization | Discrete Mathematics | Computer Security | Data Structures | Principles and Techniques of Data Science | Multivariable Calculus | Computer Programming for Engineers | Linear Algebra

Professional Experience

Berkeley Artificial Intelligence Research (BAIR)

ML & AI Undergraduate Researcher

Berkeley, CA

August 2025 - Present

- Advised by Professor Negar Mehr, working in the intersection of computer vision and robotics.
- Emphasis on diffusion, diffusion policy, imitation learning, and robot operating system (ROS) to guide and predict the trajectories of 2 robot arms based on their vision inputs and observations.
- Publishing research on the tradeoffs between policy-based and policy-free learning approaches in robotic control.

Asteri

Founding AI Engineer

San Francisco, CA

May 2025 – August 2025

- Founding AI / ML engineer for Asteri, an AI startup backed by Google Ventures.
- Building the future of work intelligence through an agentic inference engine that finds inefficiencies in corporate workstreams. Built agentic infra for clients Quasar and AstraZeneca.
- Utilized the LangChain Ecosystem, frontend & backend development, Postgres, and Microsoft AutoGen for orchestration.

University of California, Berkeley

ML & AI Undergraduate Researcher

Berkeley, CA

August 2024 – May 2025

- Worked alongside Professor Eytayo Opabola and Yiming Jia to estimate and predict seismic patterns and impact on SDOF and MDOF systems through time series deep learning models, presented at the 2025 EMI conference.
- Utilized Tensorflow and Pytorch and my passion for deep learning to build, test, and deploy specific models including LSTMs, PINNs, KANs, GRUs, and Transformers to predict displacement metrics from ground motion timeseries.

Ion Design (YC W24)

Software Engineering / AI Intern

San Francisco, CA

February 2025 – May 2025

- Implemented Ion's core Figma design feature letting users connect to their Figma account and create working apps from their designs, utilized the Langchain Ecosystem for an agentic backend and Next JS and React for the frontend.
- Utilized my Agentic AI background and communication skills to thrive in a fast-paced startup environment where I could genuinely see my contributions in every pull request, developed my critical thinking and problem-solving skills.

ML/AI Projects

Thiran (Founders Inc. – SF Startup Accelerator)

- Founding a B2B AI startup that utilizes MCP and Agentic AI to ensure secure and compliant AI generated code, while providing generated graphs to explain AI made changes, helping developers navigate and understand an AI generated codebase. Our tool ensures that AI generated code is safe, secure, and production ready, all while offering real-time support.
- Incubated at Berkeley STEP and accelerated at Founders Inc. in SF (2% acceptance rate), learned entrepreneurship, shipping fast and iterating, outreach, PMF, and full-stack engineering.

Golden Bear Bets (Statistical Modelling, Bayesian Networks, HMMs)

- Project Manager for Berkeley's Open Project Tech club – Managed a team of 14 with my 3 cofounders, built and presented in front of our 100+ person club a sports betting prediction tool using statistical models.
- Utilized Markov chains, basic BERT models, and regression models for score prediction and injury analysis.

Other Skills

Languages: English (Native), Russian (Native), Spanish (Fluent),

Programming: Python, C, C++, Go, JS, TS, Java, RISC-V, SQL, MATLAB, HTML, CSS

ML/AI & Frameworks: Tensorflow, Pytorch, LangChain, NodeJS, React, MongoDB, Electron, Tailwind, NextJS, Vite

Awards: Russian Essay Writing Competition Silver Medalist, 1st tour of Russian Culture "Medvezhonok" Olympiad

Organizations: Blockchain at Berkeley, BAIR, DataStory Consulting, Berkeley STEP, MPS Scholars, AI Ventures at Berkeley

Interests: Rugby, Football, Russian Literature, Weightlifting, Volunteering, Investment, Cooking, Premier League
